AI Engineer | 2+ Years | Agentic AI & LLM Systems | LangGraph, RAG & n8n | Published Researcher

TECHNICAL SKILLS

Agentic AI & LLMs	LangGraph, LangChain, Multi-Agent Orchestration, n8n AI Agents, MCP, RAG (pgvector, ChromaDB, embeddings), OpenAI API, Groq API, Llama 3.2 (Ollama, local inference), Prompt Engineering (few-shot, chain-of-thought), LLM Evaluation
ML & Data	XGBoost, Scikit-learn, Random Forest, Logistic Regression, Pandas, NumPy, Feature Engineering, Hybrid ML+LLM Systems
Backend & Cloud	Python (Advanced), FastAPI, Jira REST API, SQLAlchemy, Alembic, Java, Spring Boot, REST APIs, PostgreSQL, SQLite, Redis, DynamoDB, AWS (EC2, S3, Lambda), Docker
Frontend & Testing	React.js, Vite, Tailwind CSS, TypeScript, Playwright (POM), Selenium, Cypress, REST Assured, pytest, Tree-sitter, Git, GitLab, Jira

PROFESSIONAL EXPERIENCE

AI Engineer → Software Tester → Associate Developer (Intern) Jan 2024 – Sep 2026
Endava Solutions, Bangalore (formerly GalaxE Solutions)

- **AI Engineer:** Built agentic AI systems that automate test creation and framework migration for QA teams, including an LLM system that converts user stories into structured test cases with automated evaluation metrics and human-in-the-loop review.

AI-Powered Test Automation Platform LangGraph, OpenAI, FastAPI, React, PostgreSQL, pgvector, MCP

- Built a Jira-to-Playwright automation platform with RAG-based requirement analysis, test design, repository reuse and automation generation, using structured LLM outputs and evidence from Playwright browser discovery.
- Developed human-in-the-loop approval gates, validation, failure healing, test execution, traceability and GitLab delivery.

AI-Assisted Test Framework Migration Platform LangGraph, OpenAI, FastAPI, ChromaDB, Redis, Docker

- Developed a platform to convert Selenium/Cucumber and Cypress automation into Playwright-based frameworks, using repository parsing, intermediate representations, dependency graphs, migration recipes and deterministic task planning.
- Implemented LangGraph generation orchestration with OpenAI-assisted code generation, target framework validation, token tracking and generated-artifact auditing.
- Built execution and healing workflows that run generated tests in isolated sandboxes, classify failures, apply deterministic/LLM-assisted repairs and perform full-suite regression verification.

Cypress Test Generation using RAG n8n AI Agent, OpenAI embeddings, vector store

Jan–May 2025

- Built an n8n workflow generating Cypress + TypeScript tests from Excel test cases, with RAG over existing specs, Page Objects and helpers to reuse framework logic and avoid duplication.
- **Software Tester:** Full-lifecycle QA across functional, API, database and automation testing (Selenium, Playwright, REST Assured, Cypress); defect investigation and validation across teams.

RESEARCH PUBLICATIONS (ZENODO PREPRINTS)

- **QA Assistant: An Agentic AI System for Intelligent Test Failure Classification and Automated Bug Diagnosis**, Sep 2026, doi:10.5281/zenodo.22793445. Hybrid XGBoost (52 features) + Llama 3.2 system; 76.7% accuracy on 30 labeled test cases across Selenium, API and database tests.
- **When to Use ML, LLM, or Hybrid Approaches for Software Test Failure Classification: A Framework-Aware Comparative Study**, Sep 2026, doi:10.5281/zenodo.22902516. Compared pure LLM, pure ML and hybrid pipelines on 30 labeled failures across 4 frameworks; no single method won.

PERSONAL PROJECTS

QA Assistant – Hybrid ML+LLM Agentic System github.com/Vaish0202/qa-assistant

2026

- Five LangGraph agents orchestrate an XGBoost classifier (52 engineered features, <1ms) and Llama 3.2 (Ollama locally, Groq API in deployment) to classify test failures as application bugs vs. test-code problems, then draft Jira tickets for human approval or generate code-fix suggestions.
- Improved from a 60% LLM-only baseline to 76.7% (23/30) with the hybrid pipeline on a 30-case evaluation; a follow-up study showed XGBoost at 90% on Selenium vs. 33% on API tests, motivating framework-aware method selection.
- Added multi-turn conversational debugging with project-aware context. FastAPI, React, SQLite, Jira REST API.

BEE – Consent-Based Banking Platform github.com/Vaish0202/bee-banking

2024 – 2026

- Spring Boot microservices (Spring Cloud Gateway, JWT, RBAC) with an XGBoost/Random Forest fraud-scoring ML microservice and React admin dashboard.

Jenkins Release-Tracking Platform github.com/Vaish0202/jenkins-release-platform

2026

- React + Spring Boot + PostgreSQL platform with approval-gated release workflows and a three-tier test suite (JUnit/Mockito, REST Assured, Playwright).

CERTIFICATIONS

- Databricks Certified Generative AI Engineer Associate (2026)
- AWS Certified AI Practitioner (2026)
- AWS Certified Cloud Practitioner (2024)

EDUCATION

B.Tech, Computer Science & Engineering, MIT Academy of Engineering (MITAOE), Pune

2020 – June 2024

CGPA 8.14/10.0 · Kiran Girls Scholarship, Persistent Foundation · Veritas Cloud Hackathon Finalist
